

INTRODUCING

AI Forward Deployed Engineer Program

*Building an AI demo is one part of the job.
Making AI work inside a real business, that's where I come.*

9 Phases
Real Projects
FREE on YouTube

By Vishwa Mohan

Building an AI demo is one part of the work.
Making it run inside a real business is the rest.

Real users

Real data

Existing systems

Real constraints

What is a Forward Deployed Engineer?

An FDE sits at the intersection of engineering, AI, product and the customer.

01

An engineer who works directly with customers

02

Understands the customer's problem

03

Builds the solution

04

Makes it work inside the customer's company

THREE PEOPLE IN ONE

Engineer

Writes the code

Product Builder

Thinks about what to build

Problem Solver

Talks to customers

One role. Many skills.

An FDE may work across:

- Software Engineering
- Platform & Infrastructure
- Product & Customer Discovery
- AI & Machine Learning
- Solutions Architecture

How is an FDE different?

Many roles touch AI and software. An FDE carries the work from the customer's problem all the way to a solution running inside their company.

Role	What they do	What an FDE does
Software Engineer	Builds a product for all users	Makes it work for one customer
AI Engineer	Builds AI features	Makes those AI features work in a real company
Solutions Engineer	Shows demos to help sell	Actually builds and launches the solution
Consultant	Gives advice	Gives advice and also writes the code
Implementation Engineer	Sets up the product	Designs, builds and takes full responsibility

The FDE mindset

Skills get you started. These habits shape how an FDE works.

01

Take full ownership

02

Stay calm when things are unclear

03

Move fast

04

Know the tech deeply

05

Understand the business

06

Care about the customer

07

Act first, don't wait

The habits this program is built around.

What does an FDE do?

Understand the problem, figure out what needs to be built, build it, deploy it, and keep improving it once it's in the real world.

- | | |
|--------------------------------|--------------------------------------|
| 01 Understand the customer | 06 Connect it with existing software |
| 02 Find the real problem | 07 Launch it |
| 03 Plan the solution | 08 Check if it works well |
| 04 Build a quick first version | 09 Help people start using it |
| 05 Make it strong and reliable | 10 Show the business benefit |

A SIMPLE EXAMPLE

A bank wants an AI chatbot to answer customer questions. Here's what the FDE does:

1

Meets the bank's support team

2

Studies old customer questions

3

Builds a first version in a week

4

Connects it safely to bank systems

5

Launches it

6

Checks how correct the answers are

7

Trains the staff

8

Shows how much time it saves

INTRODUCING

The AI Forward Deployed Engineer Program

By Vishwa Mohan. From your first line of Python to building and launching real AI systems for businesses. We go beyond AI theory and isolated projects, into real-world problems, architecture, AI systems, deployment, and the decisions that make a solution useful.

9

Phases

100%

Real

Projects & labs

Your step-by-step roadmap

PHASE 01**Production Software & Data Engineering****PHASE 02****Applied AI I — LLM + RAG****PHASE 03****Applied AI II — Agents & MCP****PHASE 04****Backend & Enterprise Integration****PHASE 05****Frontend & Operational Applications****PHASE 06****Cloud, DevOps & LLMOps****PHASE 07****System Design at Scale****PHASE 08****Security, Reliability & Governance****PHASE 09****The FDE Craft**

Skills you'll work with

● Coding in Python

The main language for AI

● Building APIs

How software talks

● Databases & Data

Storing & cleaning data

● AI Tools

LLMs, chatbots, agents

● Cloud & Deployment

Putting apps live

● Designing Big Systems

Apps for many users

● Keeping Systems Safe

Security basics

● Talking to Customers

Explaining clearly

Learn by building

This course is full of projects, so you learn by solving real problems in company-like labs and situations. By the end, you won't just know topics. You'll have work to show.

PROJECTS YOU'LL BUILD

- 01 **AI Resume & Job Description Matcher (ATS Scorer)**
- 02 **Business Operations Report & Insights System**
- 03 **AI Accessibility Checker for websites**
- 04 **Enterprise Integration Hub — connecting many company tools**
- 05 **Ride-Sharing Driver Performance Investigation**

...and many more

FINAL PROJECT

An AI agent that runs a company's support work on its own

With human approval and safety checks built in.

How you'll learn

The aim is to help you develop the mindset and technical skills to go from "I can build an AI demo" to "I can make AI work in production."

**Designed around the FDE role**

Not just "learn AI tools"

**Learn by solving real problems**

Company-like labs and situations

**Coding + customer skills**

Meetings, planning and showing value

**One teacher, step by step**

Taught by Vishwa Mohan

**Regular AMA sessions with Vishwa Sir**

Ask anything — doubts, careers, projects

**Completely free**

Who should join?

If you're serious about working at the intersection of AI and business, this is for you.

01

College students

02

Freshers and early-career developers

03

IT professionals who want to move into AI

04

Anyone who wants to build real AI products, not just learn theory

Two ways to learn

Watch every video for free, or join the LMS for structure, practice and community.

LMS

₹99 for 3 months

- Step-by-step learning path
- Notes
- Assignments
- Projects
- Bigger community
- Leaderboard
- Completion certificate
- FDE updates & tech newsletter

Let's start.

- 01 Subscribe and turn on the bell: [YouTube channel name]
- 02 Join the LMS, ₹99 for 3 months: [LMS link]
- 03 Comment "FDE" if you're starting this journey with Vishwa

Let's build, deploy, and solve together.
